#### Explanations:

##### Claim 1

The invention that is set forth in claim 1 involves an inventive step in relation to documents 1-3 cited in the international search report.

Documents 1-3 do not disclose a feature wherein a refractory comprises 20% by weight or more of a CaO-MgO based clinker, and 60% or more of the MgO crystals that are contained within the CaO-MgO based clinker particles have a particle diameter of 50µm or less. Moreover, such a feature is not obvious to a person skilled in the art.

Furthermore, as a result of said technical feature the present invention exhibits a surprising effect whereby

even if there are MgO crystal inclusions when the steel is rolled, the frequency with which damage occurs is reduced due to the fact that the MgO crystals have a small particle diameter of 50 $\mu$ m or less. Moreover, even a person skilled in the art could not easily have conceived of this feature.
